STATE	WAR	NAVY	JUSTICE

1. Oxygen motors for torpedoes were recently demonstrated for the benefit of high-ranking Soviet officers at the Junkers works in Dessau. The motors were those that had been completed by the Germans in 1944 for driving torpedoes under water without leaving air bubble tracks on the surface. They had been developed for U-boats by Brandner.

2. The Russians expressed satisfaction with the tests, and the oxygen motors were subsequently sent to a research station at Ropenick which, under the auspices of the Russian Commissariat for Shipbuilding, represents a Russian collection center for German information and technical development and for the recruiting of specialized workers.
